

Supplementary Table 1. Etiology* of status epilepticus in the study population (n = 50)

Etiology	SE (n = 30)	RSE (n = 20)
CNS infections	16 (53)	11 (55)
Pre-existing epilepsy	8 (26)	4 (20)
Non-compliance	4	2
Unclassified [†]	4	2
Metabolic	0	2 (1 each for hyponatremia, hypocalcemia)
Intracranial bleed	3 (10)	1 (5)
Febrile status	1 (3)	2 (10)

Values are presented as number (%).

SE, status epilepticus; RSE, refractory status epilepticus; CNS, central nervous system.

*Etiology was ascribed based on history, clinical features and investigations.

[†]Unclassified: no likely cause for precipitation of SE identified despite metabolic workup, electroencephalography, and neuroimaging.
